

Carlos Gonzalez

carlos.gonzalez@email.com | (555) 123-4568 | github.com/carlos-devops

PROFESSIONAL SUMMARY

DevOps engineer with 2.5 years of experience building CI/CD pipelines and managing cloud infrastructure. Hands-on with Docker containerisation, basic Kubernetes deployments, and AWS core services. Comfortable automating operational tasks with Bash and Python scripts.

WORK EXPERIENCE

Tech Startup | DevOps Engineer | 2022 – Present

- Built and maintained Jenkins CI/CD pipelines for automated testing and deployment of 4 services
- Containerised applications with Docker; deployed to a single-node Kubernetes cluster
- Managed AWS infrastructure (EC2, S3, RDS) for development and staging environments
- Wrote Bash scripts automating routine maintenance tasks and reducing manual effort by 30%
- Configured CloudWatch monitoring with basic alerts for production services
- Participated in on-call rotation and resolved infrastructure incidents within SLA

Web Agency | Junior Systems Administrator / DevOps | 2020 – 2022

- Managed Linux web servers for hosting and basic deployment workflows
- Set up Docker development environments for the engineering team
- Configured Nginx reverse proxies and TLS certificates with Certbot

EDUCATION

Bachelor of Science in Computer Science | State University | 2020

SKILLS

Docker, Kubernetes (basic), Jenkins, CI/CD, AWS (EC2, S3, RDS, CloudWatch), Linux, Bash scripting, Python scripting, Git, Nginx, basic monitoring, Agile

PROJECTS & ACHIEVEMENTS

CI/CD Pipeline: Automated multi-stage pipeline for 4 microservices — deployment time cut from 2 hours to 15 min.

Docker Migration: Containerised legacy monolith into Docker images with docker-compose.

AWS Infrastructure: Configured VPC, security groups, and auto-scaling group for startup staging environment.

CERTIFICATIONS

AWS Certified Cloud Practitioner (2022)
