Summary

Fullstack developer, 5 years of experience building web applications with React, Node.js and MongoDB. Comfortable across the stack, from REST API design to responsive UI.

Experience

Fullstack Developer · Argaman Networks, Petah Tikva 2022 - Present

- Develop customer portal features in React + TypeScript: dashboards, forms, data tables.
- Build and maintain REST APIs in Node.js/Express, around 50 internal and external endpoints.
- Designed MongoDB schemas for the reporting module; added indexes that removed the slowest queries from the daily report job.
- Migrated legacy class components to hooks and introduced Redux Toolkit for shared state.
- Responsible for bug fixes and small features across the stack in two-week sprints.
- Work closely with product and QA on requirements and release testing.

Junior Fullstack Developer · SigmaWare, Tel Aviv 2020 - 2022

- Developed UI components in React for the company's admin console.
- Wrote Express endpoints and Mongoose models for user-management features.
- Fixed production bugs in both frontend and backend code.
- Added Jest unit tests to existing modules on both sides of the stack.
