Game & Economy Design

Shader Graph / HLSL

Blender

Toolbox

URP DOTween Unity Ads IAP
Firebase Remote Config Jira

Certification

Unity Certified Professional: Programmer

2021

Self-taught developer – learning by shipping since 2018.

Military Service

Full military service, IDF Armored Corps
2014 – 2017

Languages

Hebrew – native
English – fluent

About Me

Game Developer with 5 years of experience building and shipping mobile games in Unity. I live at the intersection of gameplay feel, performance and player economy – from prototyping a mechanic in a day to tuning a live game's balance with real player data. Shipped one indie title solo, from first sketch to store page.

Experience

Game Developer

[Pixelbay Games, Tel Aviv](#)

2021 – Present

- Core gameplay programmer on two live free-to-play mobile titles (10M+ combined downloads)
- Built gameplay systems in C#: character controller, ability system, meta progression and daily quests
- Wrote custom URP shaders (dissolve, outline, stylized water) with Shader Graph and hand-written HLSL
- Tuned the game economy – currency sinks and sources, offer segmentation; A/B tests lifted D7 retention by 6%
- Optimized for stable 60 FPS on low-end Android: object pooling, draw-call batching, texture atlases
- Run live-ops seasonal events end to end using remote config and Firebase

Indie Developer – "Neon Drift"

[Solo project, released on Google Play](#)

2019 – 2021

- Designed, built and shipped a neon-styled 2D arcade racer – 100K+ downloads, 4.4 rating
- Did everything solo: gameplay, UI, shaders, sound integration, store page and post-launch updates

Game Jams

Gravity Well

48-hour Global Game Jam entry, 2D puzzler about bending orbits · Unity, C#
