

Daniel Peretz

Senior Backend Developer

Tel Aviv · 052-5837291 · daniel.peretz88@gmail.com · linkedin.com/in/daniel-peretz-b71 · github.com/dperetz-dev

SUMMARY

Backend developer with 8 years building high-throughput Python services - currently tech lead of a payments platform handling 40M+ requests/day. Mamram graduate. Strong on Kafka-based event architectures, PostgreSQL at scale, and moving teams to Kubernetes without breaking production.

SKILLS

Languages: Python, SQL, Go (working level)

Data: PostgreSQL, Redis, Kafka, Elasticsearch

Tooling: GitHub Actions, Terraform (user level), Grafana, Sentry

Frameworks: Django, DRF, FastAPI, Celery

Infra: Kubernetes, Docker, AWS (EKS, RDS, SQS, Lambda)

Practices: TDD, contract testing, design reviews, on-call

EXPERIENCE

Senior Backend Developer, Tech Lead · Lumitech, Tel Aviv

Mar 2024 - Present

- Lead a team of 5 backend engineers building the core payments platform (\$120M processed annually).
- Redesigned order ingestion around Kafka; sustained throughput grew from 3K to 21K events/sec.
- Cut p95 API latency from 480ms to 140ms across 30 endpoints via Redis caching and query tuning.
- Owned migration of 14 services from EC2 to EKS - deploy time 35m to 7m, infra cost down 28%.
- Introduced contract testing across 9 internal APIs; cross-team production incidents dropped 40%.

Senior Backend Developer · Ferndale Cloud, Tel Aviv

Jun 2021 - Mar 2024

- Built a multi-tenant permissions service (Django, PostgreSQL row-level security) used by 200+ enterprise customers.
- Scaled the Celery export pipeline to 1.2M jobs/day with zero-downtime worker rollouts.
- Designed event-driven sync between billing and CRM over Kafka - 11 topics with exactly-once processing.
- Reduced PostgreSQL storage cost 35% through table partitioning and S3 archive tiering.
- Mentored 3 junior developers; ran the team's weekly design-review forum.

Backend Developer · Bluewave Systems, Ramat Gan

Aug 2018 - Jun 2021

- Developed REST APIs (DRF) for a fleet-tracking product with 60K daily active vehicles.
- Implemented Redis-based rate limiting and an idempotency layer; duplicate transactions dropped 99%.
- Migrated the monolith's reporting module to a standalone service - report generation 12min to 90s.
- Wrote a Locust load-testing harness later adopted by 3 other teams.

MILITARY SERVICE

IDF, Mamram - Software Developer (2014 - 2018). Graduate of the Mamram programming course; developed and maintained logistics systems in a 6-person team, including a mission-critical inventory service.

EDUCATION

B.Sc. Computer Science, The Open University of Israel (completed alongside service and work)

2016 - 2020

LANGUAGES

Hebrew - native, English - fluent.
