

Tal Bar-On

DevOps Engineer

Ramat Gan · 054-7712906 · tal.baron.dev@gmail.com · linkedin.com/in/tal-baron-4c2

PROFESSIONAL SUMMARY

DevOps engineer with 5 years keeping Linux-based production estates healthy - build pipelines, release automation and on-call ownership. Comfortable scripting in Bash and Python, and the go-to person on the team for Jenkins pipeline design. Currently expanding into container orchestration and infrastructure-as-code.

TECHNICAL SKILLS

Operating systems: Linux (RHEL, Ubuntu), systemd, networking, storage

CI/CD: Jenkins, GitHub Actions, Artifactory

Containers: Docker

Version control: Git, GitLab

Scripting: Bash, Python, Make

Cloud: AWS (EC2, S3, IAM, CloudWatch, RDS)

Monitoring: Nagios, CloudWatch dashboards

PROFESSIONAL EXPERIENCE

DevOps Engineer · Northbeam Systems, Tel Aviv

Feb 2023 - Present

- Own the Jenkins estate - 90+ pipelines across 12 teams; cut average build time from 22m to 9m by parallelising test stages and adding a shared artifact cache.
- Automated release and rollback for 20 services with Bash and Python tooling, removing the manual checklist that previously took an engineer 40 minutes per release.
- Packaged four internal services as Docker images and moved them onto a shared build agent fleet.
- Run production on-call for the Linux fleet (140 hosts): patching, capacity, incident response.
- Manage AWS accounts and IAM policy hygiene; reduced over-permissive roles from 61 to 8.

Systems / Build Engineer · Corveau Technologies, Herzliya

Aug 2020 - Feb 2023

- Maintained the Linux build farm and migrated the company from Subversion to Git across 30 repos.
- Wrote the first CI pipelines in Jenkins for three product lines, introducing automated smoke tests on every merge.
- Set up Nagios monitoring and paging for 60 hosts, replacing an inbox-based alerting habit.
- Ran a proof of concept deploying one service to Kubernetes; the team stayed on VMs for that cycle.
- Supported developers on build, packaging and environment issues as the internal escalation point.

PROJECTS

Ephemeral review environments - Bash + Jenkins job that spins a per-branch environment on AWS and tears it down after 48h; adopted by two teams.

Log triage CLI - Python tool that groups recurring Linux service failures from journald and posts a daily digest to Slack.

CERTIFICATIONS

AWS Certified SysOps Administrator - Associate (2022). Red Hat Certified System Administrator (2021).

MILITARY SERVICE

IDF, Computer Service Directorate - Systems Technician (2016 - 2019). Maintained Linux servers and on-call infrastructure for a 200-user operational unit.

EDUCATION

B.Sc. Information Systems Engineering, HIT Holon

2019 - 2023

LANGUAGES

Hebrew - native, English - fluent.
