

Omer Katzir

Frontend Developer

Tel Aviv · 053-4418820 · omer.katzir.dev@gmail.com · github.com/okatzir

SUMMARY

Frontend developer with 4 years shipping React interfaces for data-heavy products. Strong on component architecture, TypeScript and the CSS work that makes a dense screen readable. Comfortable owning a feature end to end from Figma handoff to production.

SKILLS

React, TypeScript, JavaScript (ES2022), HTML, CSS, Sass, Redux Toolkit, React Query, Vite, Webpack, Jest, Storybook, Git, Figma

EXPERIENCE

Frontend Developer *Cartogram Analytics, Tel Aviv* Jan 2023 - Present

- Build the dashboard product in React and TypeScript - 60+ shared components, used by three feature teams.
- Rebuilt the data-grid rendering path (virtualisation, memoised selectors); a 20K-row table went from 2.4s to 180ms to first paint.
- Migrated the build from Webpack to Vite, cutting local cold start from 55s to 6s.
- Set up the Storybook component library and the review habit around it.
- Wrote Jest unit tests for shared components; coverage on the design system reached 78%.

Junior Frontend Developer *Halcyon Labs, Petah Tikva* Sep 2021 - Jan 2023

- Implemented customer-facing screens in React from Figma designs, working directly with two designers.
- Converted the legacy jQuery admin area to React page by page over three quarters.
- Introduced Sass modules and a spacing scale that ended the ad-hoc inline styling in the codebase.
- Fixed the top 15 reported accessibility issues - keyboard traps, missing labels, contrast failures.

PROJECTS

Chart primitives library - small React and TypeScript wrapper over D3 scales; published internally and used by two products.

Form builder - schema-driven React form renderer with validation, built to remove the copy-pasted form code across the admin area.

EDUCATION

B.A. Computer Science, The Academic College of Tel Aviv-Yaffo

2018 - 2021

LANGUAGES

Hebrew - native, English - fluent.
