SUMMARY

Five years across the model lifecycle - roughly half building and analyzing models, half deploying and operating them. Equally at home in a notebook and in a CI pipeline.

EXPERIENCE

ML Engineer · Ferndale Cloud, Tel Aviv

Mar 2024 - Present

- Trained, containerized and deployed a fraud-scoring service (LightGBM + FastAPI) handling 900 requests/sec.
- Reduced feature-pipeline lag from 24 hours to 40 minutes by rebuilding aggregation jobs in Spark.
- Analyzed payment drop-off funnels for the product team; findings shaped two Q1 roadmap bets.
- Maintain the model registry and retraining automation (MLflow, Airflow) for 6 production models.

Data Scientist · CyberNexus, Tel Aviv

Sep 2021 - Mar 2024

- Built an alert-prioritization model (gradient boosting) that cut analyst triage load by 35%.
- Deployed my own models to production as Dockerized microservices, owning them end to end.
- Ran statistical deep-dives on detection efficacy; 3 detection rules were rewritten off the findings.
- Set up experiment tracking with MLflow, adopted by the whole 5-person research group.

SKILLS

Modeling: Python, pandas, scikit-learn, LightGBM

Pipelines: Spark, Airflow, SQL

Analysis: A/B testing, funnel analysis, visualization

Serving: FastAPI, Docker, MLflow, model monitoring

Cloud: AWS (ECS, S3, Athena)

Workflow: Git, GitHub Actions, code review

MILITARY SERVICE

Full military service, IDF (2015 - 2017).

EDUCATION

B.Sc. Statistics & Computer Science, Tel Aviv University

2017 - 2020

LANGUAGES

Hebrew - native, English - fluent.
