SUMMARY

Data engineer, 5 years. Batch and streaming pipelines on Spark/Kafka, warehouse modeling in Snowflake/dbt, data infrastructure as code with Terraform. Owns platform components end to end: design, build, cost, on-call.

EXPERIENCE

Data Engineer · DeepFlow Data, Tel Aviv 2023 - Present

- Own the ingestion platform: 40+ Airflow DAGs, ~2.1TB/day from 30 sources (APIs, CDC, S3 drops).
- Rebuilt core Spark jobs on EMR: nightly runtime 5.5h → 1.2h, compute cost down 47% (~\$18K/month).
- Migrated warehouse modeling to dbt: 300+ models with tests and docs; broken-dashboard incidents down ~80%.
- Built Kafka streaming layer (MSK, 6 topics, ~15K events/s) feeding near-real-time features at <60s end-to-end latency.
- Terraform modules for the full data stack (EMR, MSK, Snowflake grants); new environment spin-up 2 days → 40 minutes.
- Data quality gates with Great Expectations on 25 critical tables, enforced in CI before merge.

BI / Data Engineer · Corvantis, Ramat Gan 2021 - 2023

- Built ELT from operational PostgreSQL and MongoDB into Snowflake (Fivetran + custom Python extractors).
- Modeled finance and operations marts in dbt; replaced 60+ ad-hoc analyst queries with governed models.
- Ran Airflow on Kubernetes; on-call for nightly loads, 99.5% SLA met over the final 12 months.
- Wrote the team's SQL style guide and review checklist.

CORE STACK

Processing	Spark, PySpark, EMR
Orchestration	Airflow, dbt
Warehouse	Snowflake, PostgreSQL
Streaming	Kafka (MSK)
Cloud / IaC	AWS, Terraform
Languages	Python, SQL, Bash
Quality	Great Expectations

EDUCATION

B.Sc. Information Systems Engineering

Ben-Gurion University, Beer Sheva

2017 - 2021

MILITARY SERVICE

Full military service, IDF (2015 - 2017)

LANGUAGES

Hebrew - native

English - fluent
