SUMMARY

Data scientist with 4 years turning product data into shipped models - churn, pricing, and lately LLM-quality evaluation. Comfortable owning the full cycle from experiment design to production handoff.

EXPERIENCE

Data Scientist · Brightpath AI, Tel Aviv Feb 2024 - Present

- Built the LLM-output evaluation pipeline (5K labeled samples, pairwise scoring); regression detection now takes 2 hours instead of days.
- Shipped a churn-prediction model (XGBoost, AUC 0.86) powering retention campaigns for 120K users - churn down 11% in the treated cohort.
- Designed and analyzed 14 A/B tests on pricing and onboarding; two wins worth roughly \$400K ARR combined.
- Partnered with 3 backend engineers to move feature computation into dbt, eliminating training/serving skew.

Data Scientist · Qualisense, Petah Tikva Jul 2022 - Feb 2024

- Developed anomaly-detection models for sensor telemetry (isolation forest, then gradient boosting), cutting false alerts 38%.
- Automated the weekly KPI reporting layer (SQL, Metabase) used by 25 stakeholders, saving ~6 analyst-hours a week.
- Ran power analyses and sample-size planning for product experiments across 2 squads.

SKILLS

Core: Python (pandas, NumPy, scikit-learn), SQL

Experimentation: A/B testing, power analysis, CUPED

Tools: dbt, Airflow (user level), Metabase, Git

Modeling: XGBoost, LightGBM, classification, uplift

LLM: offline eval sets, pairwise judging, prompt iteration

Stats: causal inference, bootstrap, Bayesian basics

EDUCATION

M.Sc. Statistics & Operations Research, Tel Aviv University - thesis on causal inference for observational pricing data 2020 - 2022

B.Sc. Mathematics & Statistics, Ben-Gurion University of the Negev 2016 - 2019

LANGUAGES

Hebrew - native, English - fluent.
