

Dmitry Volkov

Senior Malware Researcher

Haifa · 058-6620394 · dmitry.volkov89@gmail.com · linkedin.com/in/dmitry-volkov-8r1 · github.com/dvolkov-re

SUMMARY

Reverse engineer with 8 years dissecting Windows malware, from commodity stealers to targeted implants. Focus areas: unpacking automation, C2 protocol analysis and sandbox-evasion research. 3 CVEs credited (2022 - 2024).

EXPERIENCE

Senior Malware Researcher *Corvid Security, Tel Aviv* 2024 - Present

- Drive targeted-implant analysis for the threat-intelligence product; delivered 25+ deep-dive reports in 2025.
- Reversed a multi-stage loader family protected by custom VM-based obfuscation; the resulting extractor now unpacks 4,000+ samples automatically.
- Uncovered a sandbox-evasion technique abusing timer coalescing; detection logic shipped to 60+ enterprise customers.
- Mentor 2 junior researchers and run a monthly internal reverse-engineering workshop.

Malware Researcher *NetGuard Labs, Tel Aviv* 2020 - 2024

- Owned detection research for a Windows EDR: authored 400+ YARA rules and 60 behavioral detections.
- Analyzed 30-50 samples per week (IDA Pro, Ghidra, x64dbg), prioritized by customer telemetry.
- Emulated 7 C2 protocols end to end, enabling automated config extraction across active campaigns.
- Built hypervisor-based sandbox instrumentation for Windows that cut manual unpacking workload 65%.
- Ran quarterly malware-analysis training for the SOC (20+ analysts).

Security Analyst, later Junior Malware Researcher *CyberNexus, Herzliya* 2016 - 2020

- Began in threat operations; moved to the research team in 2018.
- Reverse-engineered commodity stealers and RATs; wrote 150+ YARA rules for the detection corpus.
- Automated string decryption for common .NET obfuscators (de4dot pipelines plus custom scripts).
- Documented attacker TTPs mapped to MITRE ATT&CK, feeding the detection-engineering backlog.

RESEARCH & COMMUNITY

- 3 CVEs credited (2022 - 2024): vulnerabilities in a commercial packer and an endpoint-agent driver, disclosed responsibly.
- Speaker at Israeli security-community meetups (2023, 2025) on C2 emulation and unpacking automation.
- Maintainer of an internal YARA corpus of 1,200+ rules with CI-based regression testing.

SKILLS

Reversing: IDA Pro (IDAPython), Ghidra, x64dbg, WinDbg · **Languages:** x86/x64 assembly, C/C++, Python, Rust (reading)

Analysis: unpacking, anti-VM/anti-debug, C2 protocol RE, memory forensics (Volatility) ·

Detection: YARA, Sigma, EDR behavioral logic

Tooling: Python automation, custom sandboxes, Docker

EDUCATION

B.Sc. Computer Science, Novosibirsk State University, Russia

2010 - 2014

Relocated to Israel in 2015.

LANGUAGES

Russian - native, Hebrew - fluent, English - fluent.
