SUMMARY

Platform engineer, 12+ years across backend, DevOps and internal platforms. Builds Kubernetes-based infrastructure and developer tooling that product teams actually adopt. Go for operators and services; strong SRE practice — SLOs, error budgets, on-call that does not burn people out.

EXPERIENCE

Senior Platform Engineer · Cloudrise, Haifa 2020 - Present

- Own the internal developer platform serving 140 engineers: golden-path templates, Backstage service catalog, self-service environments.
- Wrote 3 Kubernetes operators in Go (kubebuilder): tenant provisioning, certificate rotation, database-per-namespace lifecycle. ~9K LOC, 85% test coverage.
- Standardized deployment on Helm + ArgoCD across 5 clusters, ~400 services; config-drift incidents at zero since 2023.
- Cut new-service bootstrap from 3 days to 25 minutes — template, pipeline, dashboards and alerts wired automatically.
- Migrated CI from Jenkins to GitHub Actions with self-hosted runners on K8s; median pipeline 22 min → 9 min.
- SRE rotation lead: defined SLOs for 30 tier-1 services, error budgets enforced as release gates; production incidents down 35% YoY.
- Cost: node rightsizing + Karpenter consolidation cut EKS spend 28% (~\$41K/month).
- Run the platform guild; wrote the internal "paved road" docs that onboarding now starts from.

DevOps Engineer · Corvantis, Ramat Gan 2016 - 2020

- Moved 60+ services from EC2/Chef to Kubernetes (kops, later EKS); zero-downtime migration over 14 months.
- Introduced Terraform across 3 AWS accounts; all infra changes reviewable, plan/apply in CI.
- Built the Prometheus/Grafana/Alertmanager stack from scratch; paging noise down ~70% after a full alert review.
- Wrote internal Go CLI for deploys, logs and secrets access; adopted by every team.
- Ran quarterly game days: chaos drills on staging with the on-call rotation.

Software Engineer · SigmaWare, Tel Aviv 2013 - 2016

- Backend services in Go and Python for a network monitoring product (REST + gRPC).
- Built a high-throughput metrics collector (~50K metrics/s) with batching and backpressure.
- Owned the packaging and release process — first exposure to build/deploy engineering.

KEY PROJECTS

- **Preview environments:** per-PR ephemeral namespaces with seeded data and a TTL cleanup operator; QA cycle time down ~40%.
- **Multi-cluster upgrades:** automated K8s 1.24 → 1.29 across 5 clusters with zero customer-visible downtime; surge pools + PDB audits.

STACK

Orchestration	Kubernetes (EKS), Helm, ArgoCD, Karpenter
Languages	Go, Python, Bash
IaC	Terraform, Packer
Observability	Prometheus, Grafana, Loki, OpenTelemetry
CI/CD	GitHub Actions, Jenkins
Platform	Backstage, Vault, external-secrets
Cloud	AWS (primary), some GCP

CERTIFICATIONS

CKA - Certified Kubernetes Administrator (2021)

AWS Solutions Architect - Associate (2019)

EDUCATION

B.Sc. Software Engineering

Technion, Haifa

2009 - 2013

LANGUAGES

Russian - native

Hebrew - fluent

English - fluent

- **Secrets platform:** Vault + external-secrets rollout replacing per-repo encrypted files across ~400 services.

TALKS & COMMUNITY

- DevOpsDays Tel Aviv 2024 — "An internal platform 140 engineers didn't hate: what worked."
- Occasional contributor to kubebuilder docs and external-secrets issues.
