SUMMARY

Product security engineer with a backend development background. Secure code review, threat modeling and SAST/DAST rollout — plus hands-on remediation in Java and Python when the fix is faster than the ticket.

EXPERIENCE

Product Security Engineer · Sentrix Defense, Beer Sheva 2022 - Present

- Perform secure code reviews for 6 product teams (Java/Spring, Python), ~30 reviews per quarter.
- Rolled out Semgrep SAST in CI across 40 repositories; tuned rulesets to keep false positives low enough that teams actually fix findings.
- Run DAST scans (OWASP ZAP, Burp Suite) on staging before every major release.
- Lead threat modeling sessions (STRIDE) for new features; responsible for tracking findings to closure.
- Fix high-severity findings directly in code — patched SSRF and Java deserialization issues in core services.
- Triage incoming reports from the external bug bounty program.

Backend Developer · SigmaWare, Tel Aviv 2019 - 2022

- Developed REST services in Java/Spring Boot for a network management product.
- Wrote Python integration and load tests for the API layer.
- Handled remediation tickets from annual pentest reports — the work that led me into security.

SKILLS

AppSec	Secure code review, threat modeling (STRIDE)
SAST / DAST	Semgrep, OWASP ZAP, Burp Suite
Code	Java, Spring Boot, Python
Standards	OWASP Top 10, ASVS, CWE
Tooling	Git, Jenkins, Docker
Cloud	AWS (working knowledge)

EDUCATION

B.Sc. Software Engineering

Ben-Gurion University, Beer Sheva

2015 - 2019

MILITARY SERVICE

IDF, C4I Corps (2013 - 2015)

LANGUAGES

Hebrew - native

English - fluent
